

## EPOS prototype portal

A new EPOS demonstrator has been developed. The Graphical User Interface ([GUI](#)) is being validated against use cases collected in the beginning of the EPOS-IP, where each [TCS](#) group provided several user stories. The user stories were analysed, and the new [GUI](#) reflects the basic general features requested by the TCSs. The [GUI](#) is a draft version that is not fully working, but it is properly connected and integrated to the [[ICS Architecture scheme](#)].

Currently, the user can use four different modes:

- Discovery (searching for data, persons, services, etc.).
- Workspace (saving items for later use, e.g. during the Discovery).
- Visualise (plot and analyse data).
- Process (combine items from Workspace into a workflow for customized processing/analysis).

The [GUI](#) is currently hosted at: [www.ics-c.epos-eu.org/](http://www.ics-c.epos-eu.org/)
